CAPRON ANTI-SKID TILES: SAFETY MEETS ELEGANCE

At CAPRON, we believe that style and safety should go hand-in-hand. Introducing our range of anti-skid tiles, designed to bring the perfect balance of beauty and functionality to your spaces.

Whether you're looking to enhance your home, office, or outdoor areas, our tiles ensure safety without compromising on design.

Our tiles boast the R11 surface rating, an industry standard for superior slip resistance.

The R11 rating is ideal for areas prone to moisture, such as bathrooms, kitchens, patios, or pool decks.

With these tiles, you're assured of a safe surface even when it's wet.

R11
Surface

ANTI-
SKID TILES

A slip resistance rating for tiles, indicating a moderate to high grip, ideal for wet or slippery areas.

R11 refers to a slip resistance rating used in the classification of tiles, particularly for safety in wet or sloped areas.

The "R" value measures the degree of friction provided by the tile's surface. Specifically, R11-rated tiles offer a moderate to high level of slip resistance, making them suitable for areas prone to getting wet, such as bathrooms, kitchens, outdoor spaces, and commercial environments.

This rating indicates that the tile can be safely used in conditions where there is a risk of slipping due to moisture.

TILES INSTALLATION

Special Laying Instruction:

Tiles Spacers

We always recommend to use the Tile Spacer for laying of different tiles as per its type and size. Tile Spacer is specially designed to create a uniform gap between tiles, this results in proper alignment throughout the tiling area. It is available in different width sizes starting from 2mm width to 10 mm width.

Features and Benefits:

- Spacers accommodate the movements due to thermal variations and different loads
- When filled with the right grout material, they can efficiently reduce the free water flow / leakage through the joints and also make the joints anti - fungal and anti - bacterial
- With spacers, we can create uniform designs and pattern
- Improved aesthetics and dimensional stability to the entire tile/ stone assembly
- It ensures longer life span of tile installation
